

Disclosure Pursuant to the California Voluntary Carbon Market Disclosures Act (AB 1305)

In 2024 (reporting year 2023), The Hartford disclosed the components of its operational greenhouse gas emissions ("GHGe") footprint, as detailed in its [CDP report](#). That disclosure included a voluntary, purchased GHGe offset of 7100 mtCO₂e.

The Hartford's GHGe offset for 2023 was purchased from 3Degrees Group, Inc. The offset is sourced to the Winchester Landfill Gas Project (Provider ID 217071 and Verra Project ID 833), a landfill-based methane recovery and destruction project. Credit for the offset was provided through the Verified Carbon Standard (VCS) verification program. Further, the Winchester Landfill Gas Project is listed as a [Verified Offset Project](#) by Yale University's Office of Sustainability.

The Hartford's reported emissions and offset figures were subject to an independent, third-party limited assurance process conducted by Apex Companies, LLC. The Apex report concluded, at a limited assurance level, that there was no evidence that the data presented was other than a fair and accurate representation of The Hartford's actual emissions data, nor was there evidence that the data had been prepared out of accordance with WRI/WBCSD standards applicable to each scope of emissions. The Apex verification opinion also concluded that The Hartford "has established appropriate systems for the collection, aggregation and analysis of quantitative data for determination of these GHG emissions for the state period and boundaries."
