

Together, let's construct a plan to help you improve safety and reduce risks.

Focused on our construction customers.

Your risk engineering consultant can provide the dedicated attention you deserve. Since no two contractors are exactly alike, your service plan will be created with your input and custom-designed to fit your business's needs.

Specializing in risk engineering for construction businesses.

The construction industry has its share of hazardous equipment and dangerous processes – from operating cranes and blasting rock, to repairing bridges, digging trenches, and erecting scaffolds. Even under these treacherous conditions, it is possible to perform construction work safely and with a minimum of accidents and injuries. What's needed is an understanding of the risks involved and the knowledge of appropriate, realistic solutions to help prevent or control the hazards. This is just what we deliver through our highly skilled risk engineering consultants and services tailored specifically for the construction industry.

Committed to construction.

We've been writing contractors of all sizes for decades – so we understand your industry and are committed to it. As your business insurance provider, we share your desire to control costs. We're committed to helping your business improve safety and reduce losses. That's why we're staffed with construction specialists across the country who provide consultative service to businesses like yours.

Delivering experience, knowledge and focus.

Many of our risk engineering consultants have worked on construction sites as safety directors and in other capacities. This practical experience, combined with a dedicated focus on construction and extensive training – including OSHA 10 and 30 – makes them uniquely qualified to advise you about safety and injury prevention.

Tailoring service plans to your needs.

As an outside observer, your risk engineering consultant brings a fresh perspective to your construction project. Together with you, we'll develop a service plan that reflects your specific needs and preferences. We start by asking you what safety risks are most critical to your operations and then develop a plan to improve safety for those risks.

Just a few of the risk engineering services that can benefit your business:

- **Pre-construction surveys** – Prior to construction, your consultant can review your project from a broad perspective and identify problems that may develop inside and outside the scope of your construction project.
- **Job site surveys** – At your existing job sites, your consultant can help identify hazardous conditions and offer cost-effective, practical solutions to correct them.
- **Safety manual** – If you don't have a safety manual or want your manual updated, your consultant will be happy to assist you.
- **Loss analysis** – We can analyze your losses, identify what's causing them, and recommend ways to help reduce accidents and lower your losses.
- **Industrial Hygiene Lab, AIHA-accredited¹** – Our industrial hygiene specialists will consult with you to assess your operations and help you identify, quantify, understand and control hazardous conditions, such as excessive noise and airborne contaminants.
- **Comprehensive training** – We offer a wealth of safety training for the construction industry, from safe excavation to fall protection and scaffold safety.
- **Supervisory leadership and safety management workshop** – Helps supervisors gain the necessary skills to involve and motivate construction employees, plan for complex construction operations, and recognize the financial impact that the safety and health program plays in the overall success of your company.
- **Speakers for safety meetings** – Our highly skilled professionals are happy to speak at your safety committee meetings on a variety of loss prevention topics that either you or we suggest. Topics can be geared to your employees, supervisors, subcontractors, or other individuals.
- **Library of resource materials** – We offer access to a vast library of materials including best practice bulletins, technical information papers (TIPS), inspection checklists, training presentations, sample safety and health programs and written program guides.
- **Monthly toolkit talk email** with contractor tips and weekly safety topics to review on the job site. Sign up at TheHartford.com/construction
- **Basic foreman training program** – Designed to provide entry-level foremen with vital skills to help improve project safety.
